Solid Residues Management Plan

A Conceptual Approach

Celso Foelkel

Solid Residues Management Plan

A Conceptual Approach

- **Prevention at the source;**
- **Quantification of all generated residues;**
- **Qualification of all solid residues (chemical compositions);**
- **Including specifications to be followed-up in the ISO 9001 and 14001 systems to all residues**
- **Calculation of the economic value for each one of the residues;**
- **Evaluate measures for recycling and/or composting what could be feasibly done;**
- **Dispose in a safe way what is not possible to recycle.**

Solid Residues Management Plan

- **Preventing the generation of the residues, by acting at the sources;**
- **Handling separately the different types of residues;**
- **Recycling or Composting the organic solid residues;**
- **For soil disposal, only the wastes authorized by legislation should be included;**
- **Harmful and hazardous residues disposal should follow legislation.**
