**Título:/Title: *Eucalyptus paniculata* poles and sawtimber**

**Por: / By: Anonymous**

**E-mail:**

**Questão: /Question:**

**Dear Sir,**

I have read with interest your website - we are currently looking for *sawntimber and roundpoles* for water construction / shore protect (species *Eucalyptus paniculata*).

This business is *durability class 1 timber* meaning species that will last a very long time (won't rot even when emerged into the ground). For the time being we are using e.g. *Eucalyptus cloeziana*, *Eucalyptus cladocalyx*, but we hear there is one species call *Eucalyptus paniculata*

which is available in BRAZIL.

In fact we're talking about FSC-certified wood here.

Can you help us to find good suppliers for this material?

I would be pleased to hear from you !

**Thank you / best regards**

**Resposta por Celso Foelkel: / Answer by Celso Foelkel:**

**Sir,**

Some decades ago, *Eucalyptus paniculata* wood was used and available in some states from south to center of Brazil, mainly due to high wood density and suitability for manufacturing electricity poles, fence poles, charcoal, railroad sleepers, wood bridges, firewood, etc.

However, the growth rate was not similar to the fast growing species as *Eucalyptus urograndis*, and others. For this and for other reasons, the area planted with this species has been dramatically reduced.

Today, there is a limited availability of this high density eucalyptus for commercial purposes, but you may eventually find some. Other potential species are *Corymbia citriodora* and *Eucalyptus cloeziana*.

I'm providing two references for your contacts in the search for high density eucalypt wood.

I'm not sure whether or not they may help, but the contacts are advisable:

**Dear Mr. Foelkel,**

Thank you very much for your great support!  
We'll get in touch with all your mentioned contacts and hope to get back interesting info.

**Best regards.**
